Secondary identifying numbers

## Study information

#### Scientific Title

A randomised controlled trial of extended brief interventions for alcohol-dependent patients in an acute care setting

#### Acronym

**ADPAC** 

#### **Study objectives**

Extended Brief Interventions (EBI) delivered to alcohol-dependent patients in a hospital setting by an Alcohol Specialist Nurse (ASN) will be effective in reducing overall alcohol consumption and improving on the standard measures of alcohol dependence.

### Ethics approval required

Old ethics approval format

#### Ethics approval(s)

North West 2 Research Ethics Committee - Liverpool Central, 23/09/2009, ref: 09/H1005/61

#### Study design

Single-centre randomised controlled trial with single-blinded independent follow up

#### Primary study design

Interventional

### Secondary study design

Randomised controlled trial

## Study setting(s)

Hospital

## Study type(s)

Treatment

### Participant information sheet

Not available in web format, please use contact details below to request a patient information sheet.

## Health condition(s) or problem(s) studied

Alcohol dependence

#### **Interventions**

Consecutive alcohol-related attendances will be screened for alcohol dependence. Eligible patients who consent will be randomised to either the treatment arm or normal clinical care. Randomisation will be carried out using computer-generated sequentially-numbered sealed envelopes.

Treatment: The EBI utilised by the ASN will follow the FRAMES approach (6 point approach -

Feedback, Responsibility, Advice, Menu of Options, Empathy, Self-efficacy). Four to six interventions (20 minutes duration each) will be delivered by an ASN within a twelve-week period. Measures will be recorded at recruitment, 12 weeks and 6 months.

#### Intervention Type

Other

#### Phase

**Not Specified** 

#### Primary outcome measure

- 1. Alcohol Use Disorders Identification Test (AUDIT)
- 2. Severity of Alcohol dependence (SADQ)

#### Secondary outcome measures

- 1. Measure of Dependence (Leeds Dependency Questionnaire).
- 2. Quantity and frequency of alcohol consumption in UK units per drinking day.
- 3. Readiness to Change Questionnaire (RTCQ).
- 4, Number of ED attendances 6 months pre and 6 months post treatment/control.
- 5. Hospital length of stay sum days in hospital 6 months and 6 months post treatment/control.
- 6. Number of hospital admissions 6 months pre and 6 months post treatment/control.
- 7. Length of stay for initial treatment in days.

#### Overall study start date

01/11/2009

### Completion date

01/11/2012

## **Eligibility**

## Key inclusion criteria

Patients with a score equal to or greater than 16 on the Alcohol Use Disorder Identification Test (AUDIT) screening tool.

## Participant type(s)

Patient

### Age group

Adult

#### Sex

Both

### Target number of participants

260

#### Key exclusion criteria

- 1. Patients known to be intravenous drug abusers
- 2. Patients unable to give informed consent

- 3. Patients whose medical co-morbidity requires frequent or long-term hospital admission
- 4. Patients known to be pregnant
- 5. Patient's presently recruited to any other research trial

#### Date of first enrolment

01/11/2009

#### Date of final enrolment

01/11/2012

## Locations

## Countries of recruitment
