# Study information

## Scientific Title

### Study objectives

Verrucae, or warts, are a common, infectious and sometimes painful problem, but it is uncertain which is the most effective treatment. We plan to compare two commonly used treatments for warts: salicylic acid with monochloroacetic acid or cryotherapy. We are interested to know how effective the two treatments are in cleaning up the warts and also how cost effective the two treatments are compared to one another. Patients will also be asked about acceptability with their treatment and possible side effects such as pain.

### Ethics approval required

Old ethics approval format

### Ethics approval(s)

Not provided at time of registration

### Study design

Randomised controlled trial

### Primary study design

Interventional

### Secondary study design

Randomised controlled trial

### Study setting(s)

Not specified

### Study type(s)

Not Specified

## Participant information sheet

### Health condition(s) or problem(s) studied

Skin and Connective Tissue Diseases: Warts

### Interventions

Database analysis, Questionnaires, Randomised Controlled Trial - to compare:

1. Cryotherapy
  2. Salicylic acid with monochloroacetic acid
- For treatment of plantar warts

August 2008: Trial stopped 2006.

**Intervention Type**

Drug

**Phase**

Not Specified

**Drug/device/biological/vaccine name(s)**

Salicylic Acid with Monochloroacetic Acid

**Primary outcome measure**

A recent systematic review has highlighted the uncertainty with respect to the optimal treatment of verrucae and warts (Gibbs Set et al, BMJ, 2002). Freezing warts using cryotherapy is widespread but there is little evidence showing it is effective. However, it may be relatively cost effective compared with chemical treatments in that fewer visits may be required to eradicate the condition. There is a need for a randomised controlled trial with a cost effectiveness analysis to ascertain which is the best approach. The evidence base would aid clinical decision makers and also health care managers in resource allocation

**Secondary outcome measures**

Not provided at time of registration

**Overall study start date**

29/10/2003

**Completion date**

31/08/2004

**Reason abandoned (if study stopped)**

Problems with staffing.

**Eligibility****Key inclusion criteria**

Not provided at time of registration

**Participant type(s)**

Patient

**Age group**

Not Specified

**Sex**

Not Specified

**Target number of participants**

133 in each treatment group

**Key exclusion criteria**

Not provided at time of registration

**Date of first enrolment**

29/10/2003

**Date of final enrolment**

31/08/2004
