Study information

Scientific Title

Study objectives

The trial will evaluate the effectiveness of inviting teenagers for a primary care consultation with health behaviour advice and appropriate follow-up. The focus will be on Health of the Nation issues of depression, sexual health and smoking habits. There is evidence that intervening at this age may reduce immediate health problems related to depression and sexual transmitted disease, and reduce smoking levels thus reducing long term risks of chronic disease.

Health condition(s) or problem(s) studied

Health behaviour

Interventions

1. Usual care
2. Usual care plus primary care consultation with client-led health behaviour advice and follow-up

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

1. The level of risk behaviour at three and twelve months post intervention. Level of health behaviour for smoking, alcohol use, diet, exercise. Level of knowledge for drugs and sexual health (self reported by questionnaire, smoking will be validated by cotinine saliva samples)
2. Mental health at three months and twelve months (using Beck Depression Inventory)
3. Physical health at three months and twelve months (self reported by questionnaire)
4. Achievement of health behaviour goals set by teenager at the consultation for three and twelve months (self-addressed)

Secondary outcome measures

1. Teenagers' satisfaction with the consultations (questionnaire)
2. Appropriate use of services (questionnaire and medical records)

Overall study start date

31/08/1998

Completion date

31/12/2000

Eligibility**Key inclusion criteria**

Teenagers aged 14 and 15 years identified by the trial practices' age/sex registers within the six month recruitment period.
