Study information

Scientific Title

Acronym

CC:DOC

Study objectives

A collaborative care intervention for patients with major depressive disorder who are on sick leave will result in more reduction in depressive symptoms and a faster return to work than usual care.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the Ethics Committee of the VUmc (METc, VUmc, Amsterdam) on the 3rd August 2007 (ref: 2006/246).

Study design

Randomised controlled parallel armed trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Depressive disorders

Interventions

The intervention follows a collaborative care model with adherence and compliance enhancing techniques, contracting, Problem Solving Treatment (PST), antidepressant medication, a workplace intervention, and manual guided self help aimed at return to work and healthy lifestyle.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

The primary outcome measure is the extent of reduction in depressive symptoms, as measured by the PHQ-9.

Secondary outcome measures

The secondary outcome measure is time to return to work, which will be acquired upon inquiry with company doctor and patient and which refers to the duration of absence through illness until work is resumed.

Overall study start date

01/03/2007

Completion date

01/06/2010

Eligibility

Key inclusion criteria

Employees on sick leave lasting between 4 to 12 weeks with major depressive disorder and who do not have the prospect of full return to work yet.

Participant type(s)

Patient

Age group

Adult

Sex

Not Specified

Target number of participants

126

Key exclusion criteria

1. Patients who are suicidal, psychotic or have dementia, as noticed by the company doctor
2. Addicted to drugs or alcohol, as assessed by the Mini International Neuropsychiatric Interview (MINI)
3. Patients who do not speak Dutch sufficiently to fill in the questionnaires

Patients who are already receiving psychiatric treatment can be included in the study, in case of mutual agreement with the current care giver.
