Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Acne vulgaris

Interventions

- 1. Pulsed-dye laser at 585 nm
- 2. Lymecycline orally & isotretinoin gel topically

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Lymecycline orally & isotretinoin gel topically

Primary outcome(s)

Improvement after 3 months in both groups using the Leeds revised grading system

Key secondary outcome(s))

Patient satisfaction, compliance, cost

Completion date

31/10/2005

Eligibility

Key inclusion criteria

Age 16-45 with moderate active inflammatory acne vulgaris

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria
