Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Borderline personality disorder

Interventions

The intervention to be researched is a Psychoanalytic Brief Group treatment, it is a 20-week outpatient programme. There are two treatment groups. Each group will consist of 8 subjects. The control will consist of a waiting list control. This will be treatment-as-usual for the subjects and will consist of their ongoing existing treatment in psychiatric or primary care services.

Intervention Type

Behavioural

Primary outcome measure

Is a psychoanalytically-oriented brief group therapy an effective treatment for borderline personality disorder?

Secondary outcome measures

Reduction in self harm and suicidal ideation, reduction in symptoms and improvement in function and the cost implication of this treatment

Overall study start date

09/01/2006

Completion date

09/01/2008

Eligibility

Key inclusion criteria

Clinical diagnosis of Borderline Personality Disorder meeting DSM-IV criteria and clinical judgment of capacity of psychological mindedness

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

32

Key exclusion criteria

Clinical risk assessment that there may be a significant acute risk of suicide or harm to others, that there is an active psychotic illness, or that there is use of alcohol or drugs to the extent that the subject cannot engage with the treatment.
