Study information

Scientific Title
Research for the effect of biological response modifiers (BRMs) on natural killer (NK) cell cytotoxicity

Study objectives
Natural killer (NK) cells play an important role in innate immune response by destroying tumours and virus-infected cells without prior stimulation. Because of their attractive features, the application of NK cell-based immunotherapy has been extended to cancer treatment. This study investigates the function of biological response modifiers (BRMs) on NK cell cytotoxicity and the effect of NK cell mediated immunotherapy in cancer.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Samsung Medical Centre Institutional Review Board. Date of approval: 18/03/2008 (ref: 2008-03-038)

Study design
Single-centre, observational study

Primary study design
Observational

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Immunotherapy in cancer

Interventions
A blood sample will be obtained from each participant. A variety of BRMs (small synthetic peptides, interleukins, natural extracts) will be tested on the blood samples to measure their effect on NK cell cytotoxicity. This will be measured using established assays such as carboxyfluorescein diacetate succinimidylester (CFSE). The BRMs that show high levels of NK cell cytotoxicity will have the potential for use in cancer treatment.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. To find BRMs that lead to the highest levels of NK cell cytotoxicity in the treated blood samples
2. To find the optimum dose and duration of treatment with the BRMs found to elicit highest levels of NK cell cytotoxicity

Key secondary outcome(s))
Gene expression profiles associated with peripheral blood lymphocyte (PBL) cytotoxicity and related mechanisms in the blood samples.

Completion date
30/04/2010

Eligibility

Key inclusion criteria
1. Healthy volunteers aged 18 years or older, both males and females
2. Written informed consent

Participant type(s)
Healthy volunteer

Healthy volunteers allowed
No

Age group
Adult

Lower age limit
18 years

Sex
All

Key exclusion criteria
1. Aged less than 18 years
2. Those who do not speak Korean

Date of first enrolment
01/05/2008

Date of final enrolment
30/04/2010

Locations

Countries of recruitment
Korea, South

Study participating centre
