Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Injury, Occupational Diseases, Poisoning: Ankle sprain

Interventions

A randomised controlled trial involving participants being assigned control shoe (rocker) or experimental shoe (MDT).

Measurements will be taken before and after to assess the difference. Subjects will be given instructions and diary for 1 week before returning for testing.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Self-assessment of ankle function via questionnaire

Secondary outcome measures

Not provided at time of registration

Overall study start date

18/05/2006

Completion date

31/12/2007

Eligibility

Key inclusion criteria

1. 2 groups of 20 individuals contacted within 3 days of presenting to Guy's Minor Injury Unit with sprained ankle
2. Aged 18-60 years old

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Upper age limit

60 Years

Sex

Not Specified

Target number of participants

40

Key exclusion criteria

1. Subjects with abnormal sensory problems in the thigh and lower leg, subjects with any neurological problem affecting their balance and subjects will be excluded.
2. Patients who have had musculoskeletal or neurological problem affecting their legs or low back which required medical attention in the last 6 months will also be excluded.

Date of first enrolment

18/05/2006

Date of final enrolment

31/12/2007
