Study information

Scientific Title
Intraperitoneal levobupivacaine and dexamethasone for post-operative pain after laparoscopic cholecystectomy

Study objectives
Intraperitoneal levobupivacaine and dexamethasone for Post-operative pain after laparoscopic cholecystectomy

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Signs and Symptoms: Post operative pain

Interventions
Randomised Controlled Trial. 3 groups:
1. Control group will not receive intraperitoneal local anaesthetic or dexamethasone as is our usual practice
2. L group will receive 15 ml of 0,5% levobupivacaine after establishing pneumoperitoneum and again at the end of the procedure
3. LD group as group L plus dexamethasone

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
Pain Scores

Key secondary outcome(s))
Not provided at time of registration

Completion date
01/07/2006

Reason abandoned (if study stopped)

Participant recruitment issue

Eligibility

Key inclusion criteria
Patients undergoing Laparoscopic Cholecystectomy

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
All

Key exclusion criteria
1. Patients allergic to local anaesthetics or dexamethasone, ASA IV and V patients.
2. Patients with acute cholecystitis
3. Patients with previous laparotomy, any intraoperative complications like perforation of the gall bladder, major vascular injury and any procedure which is converted to an open one

Date of first enrolment
01/10/2004

Date of final enrolment
01/07/2006
