Study information

Scientific Title

Does early compression therapy following deep vein thrombosis prevent development of post-thrombotic limb syndrome?

Study objectives

To assess the benefits of early high grade compression in patients with recent first episode proximal deep vein thrombosis.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Single-blinded randomised controlled study

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Cardiovascular: Deep vein thrombosis (DVT)

Interventions

1. Patients wear compression stockings for 6 months
2. No stockings

Please note, this trial was stopped in 2004 due to poor recruitment.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Venous function

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/06/2003

Completion date

01/04/2006

Reason abandoned (if study stopped)

Participant recruitment issue

Eligibility

Key inclusion criteria

250 patients with first episode single limb, proximal vein thrombosis.

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

250

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/06/2003

Date of final enrolment

01/04/2006
