Study information

Scientific Title

Study objectives

In patients who have a manipulation under anaesthesia (MUA) for a frozen shoulder, does additional arthroscopic capsule release make a significant difference in function as measured by the Constant score?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Prospective double blind randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Musculoskeletal Diseases: Frozen shoulder

Interventions

Please note that as of 27/05/10 the status of this trial was changed to "stopped". The trial was stopped due to poor recruitment.

Prospective randomised controlled trial.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Constant score (measurement of shoulder function).

Secondary outcome measures

Not provided at time of registration

Overall study start date

23/06/2003

Completion date

23/06/2004

Reason abandoned (if study stopped)

Participant recruitment issue

Eligibility

Key inclusion criteria

66 patients with a manipulation under anaesthesia (MUA) for a frozen shoulder

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

66

Key exclusion criteria

Does not match inclusion criteria

Date of first enrolment

23/06/2003

Date of final enrolment

23/06/2004
