Study information

Scientific Title

A comparison of laparoscopic total extra-peritoneal versus Lichtenstein hernia repair: randomised prospective single blind trial

Study objectives

A randomised prospective, single-blind comparison of laparoscopic total extra-peritoneal versus Lichtenstein hernia repair.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised prospective single-blind trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Not Specified

Participant information sheet**Health condition(s) or problem(s) studied**

Urological and Genital Diseases: Lichtenstein hernia repair

Interventions

Group 1 - Lichtenstein repair

Group 2 - totally extraperitoneal laparoscopic repair

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Pain scores; time to return to work/normal activities of daily living (ADL); physiotherapy assessment; clinical recurrence.

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/05/2002

Completion date

31/03/2005

Eligibility

Key inclusion criteria

All adult patients with inguinal hernias who are suitable for a laparoscopic repair.

Participant type(s)

Patient

Age group

Adult

Sex

Not Specified
