Study information

Scientific Title

Study objectives

Does skin-to-skin contact compared to routine care on first breast feeding experience and at 3 months improve quality and duration of breast feeding?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Pregnancy and childbirth: Breast feeding

Interventions

Comparing skin-to-skin with routine care

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Success of first breast feed
2. Prevalence of breast feeding at 3 months
3. Maternal satisfaction with skin-to-skin contact
4. Midwives' attitudes to the implementation of skin-to-skin contact in labour ward

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/01/2003

Eligibility

Key inclusion criteria

200 healthy pregnant women +36 weeks gestation who intend to breast feed

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Female

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/01/2001

Date of final enrolment

01/01/2003
