Study information

Scientific Title

A randomised controlled pilot study in the use of hyperbaric oxygen therapy versus metronidazole in chronic pouchitis

Study objectives

To assess the benefits and effectiveness of hyperbaric oxygenation as a potential new treatment for chronic or refractory pouchitis.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Pouchitis

Interventions

Randomised controlled trial comparing:

- 1. Hyperbaric oxygen therapy
- 2. Metronizadole

Intervention Type

Mixed

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s))

Not provided at time of registration

Completion date

10/12/2005

Eligibility

Key inclusion criteria

Not provided at time of registration

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria
