Study information

Scientific Title

Acronym

CAPP1

Study objectives

Daily use of aspirin and resistant starch will reduce the risk of polyp formation and of subsequent colon cancer.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Prevention

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Familial Adenomatous Polyposis (FAP)

Interventions

Factorial design of:

A. 600 mg Aspirin and 30 g Resistant Starch

B. Placebo Aspirin and 30 g Resistant Starch

C. 600 mg Aspirin and 30 g Placebo Starch

D. Placebo Aspirin and Placebo Starch

Intervention Type

Drug

Phase

Not Specified

Drug/device/biological/vaccine name(s)

Aspirin, resistant starch

Primary outcome measure

- 1. Age at colectomy
- 2. Reduction in size of polyps
- 3. Changes in crypt cell proliferation

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/01/1993

Completion date

31/12/2003

Eligibility

Key inclusion criteria

- 1. Known carriers of familial adenomatous polyposis (FAP), either by molecular genetic analysis or by phenotypic features
- 2. Over 10 years of age with an intact colon

Participant type(s)

Patient

Age group

Not Specified

Sex

Both

Target number of participants

400

Key exclusion criteria

- 1. Already taking Non-Steroidal Anti-Inflammatory Drugs (NSAIDs)
- 2. Partial Resection
- 3. If over 21 years of age to take treatment for 1 year only

Date of first enrolment

01/01/1993

Date of final enrolment

31/12/2003
