Study information

Scientific Title
Does topical anaesthetic gel (Instillagel®) reduce pain discomfort during insertion of intrauterine contraception? A randomised, placebo-controlled, double-blind trial

Study objectives
Intrauterine device (IUD)/intrauterine system (IUS) are highly effective, long-acting, reversible methods of contraception, and increasing uptake of these methods among women in the UK and elsewhere will reduce unintended pregnancies. Fear or experience of pain during insertion constitute an important barrier to uptake of these methods. Reliable evidence about reducing pain or discomfort during insertion is essential to:
1. Improve the experience for women having an IUD/IUS fitted and advise them appropriately
2. Provide more evidence based guidelines for health care professionals in IUD/IUS insertion

Ethics approval required
Old ethics approval format

Ethics approval(s)
To be submitted as of 25/07/2008

Study design
Single-centre, randomised, placebo-controlled, double-blind trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Not specified

Study type(s)
Not Specified

Participant information sheet
Not available in web format, please use the contact details provided in the Interventions field to request a patient information sheet

Health condition(s) or problem(s) studied
Unintended pregnancy and abortion

Interventions

2% lignocaine gel (Instillagel®; topical) or an inert equivalent of it will be provided by the manufacturer of Instillagel®. This will be coded and the code only released at the end of the trial. Neither the woman, or the clinician (nor statistician) will be aware of the active/placebo status.

Please use the following contact details to request a patient information sheet:

Please note that this trial was stopped in March 2009.

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
lignocaine (Instillagel®)

Primary outcome measure
Pain scores at the end of the insertion procedure. Pain scores will be assessed visually using a numerical rating scale of 1-10.

Secondary outcome measures
Pain scores relating to the use of the Allis forceps prior to IUD/IUS insertion. Pain scores will be assessed visually using a numerical rating scale of 1-10.

Overall study start date
01/09/2008

Completion date
28/02/2010

Reason abandoned (if study stopped)
Lack of funding/scholarship

Eligibility

Key inclusion criteria
1. Women choosing an IUD/IUS, for whom this is an appropriate choice of contraception
2. Between the ages of 16 and 45

Participant type(s)
Patient

Age group
Adult

Sex
Female

Target number of participants
200

Key exclusion criteria
Women choosing an IUD/IUS, for whom this is not an appropriate choice of contraception

Date of first enrolment
01/09/2008

Date of final enrolment
28/02/2010
