# Study information

Scientific Title

Evaluation of a specific physiotherapy programme following resurfacing arthroplasty - is it more effective at improving function and muscle strength than standard rehabilitation?

#### Acronym

Rehab after RHA

#### **Study objectives**

To evaluate the effectiveness of a post-operative physiotherapy programme specifically designed to the needs of patients with hip resurfacing arthroplasty (RHA) compared to standard protocols based upon total hip arthroplasty (THA) rehabilitation guidelines.

#### Hypothesis:

A specific rehabilitation programme following hip resurfacing arthroplasty (RHA) will improve functional outcome assessed at one year post surgery.

#### Design:

Single blind prospective randomised clinical trial.

#### Ethics approval required

Old ethics approval format

#### Ethics approval(s)

Oxfordshire Research Ethics Committee (REC) B approved in August 2006 with an amendment in April 2008 (ref: PB-PG-0407-13216)

#### Study design

Randomised interventional treatment trial

#### Primary study design

Interventional

# Secondary study design

Randomised controlled trial

## Study setting(s)

Hospital

#### Study type(s)

Treatment

#### Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

#### Health condition(s) or problem(s) studied

Topic: Musculoskeletal; Subtopic: Musculoskeletal (all Subtopics); Disease: Musculoskeletal

#### **Interventions**

A specific rehabilitation programme focussing on range of hip flexion, hip extension strength and single stance higher-demand activities. The content of the rehabilitation programme has been developed following appraisal of the existing literature, focus groups with arthroplasty practitioners and by involvement of a group of patients/service users.

Data will be analysed on an intention to treat basis.

Follow up length: 12 months

#### Intervention Type

Other

#### Phase

Not Applicable

#### Primary outcome measure

Oxford Hip Score at 6 and 12 months

#### Secondary outcome measures

Mesaured at 6 weeks, 4 months, 12 months:

- 1. Timed sit-to-stand
- 2. Timed Single leg stand
- 3. Maximal isometric torque strength for flexion

#### Overall study start date

01/09/2008

#### Completion date

31/12/2009

# **Eligibility**

#### Key inclusion criteria

All patients (either sex, no age limit) who are listed to receive a hip resurfacing arthroplasty will be eligible to take part in the study.

#### Participant type(s)

Patient

#### Age group

**Not Specified** 

#### Sex

Both

#### Target number of participants

Planned Sample Size: 50

#### Key exclusion criteria

- 1. Undergoing bilateral arthroplasty
- 2. Minimally invasive surgery
- 3. Further lower limb joint surgery is planned within the next twelve months
- 4. Unable to provide informed consent

## Date of first enrolment

01/09/2008

#### Date of final enrolment

31/12/2009
