Study information

Scientific Title
Iontophoresis as a possible therapy for digital ischaemia - preliminary studies in patients with scleroderma spectrum disorders

Acronym
Iontophoresis Study

Study objectives
Six patients with scleroderma (SSc) spectrum disorder, and associated digital ischaemia and/or ulceration, who are in hospital to receive intravenous (IV) vasodilation therapy, will be recruited for the study.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Salford and Trafford Research Ethics Committee approved (ref: 04/Q1404/209)

Study design
Single centre non-randomised interventional treatment trial

Primary study design
Interventional

Secondary study design
Non randomised controlled trial

Study setting(s)
Other

Study type(s)
Treatment

Participant information sheet
Not available in web format, please contact Tonia.Moore@srft.nhs.uk to request a patient information sheet

Health condition(s) or problem(s) studied
Topic: Skin, Musculoskeletal; Subtopic: Musculoskeletal (all Subtopics), Skin (all Subtopics); Disease: Musculoskeletal, Dermatology

Interventions
Iontophoresis will be delivered over the whole finger. The iontophoresis dose will be 200 uA of 0.5% NaNP (diluted by volume in distilled water) for 5 mins, 4 times a day (but this will be reduced if troublesome tingling/paraesthesis occurs with this schedule) for 5 days (the duration of the iloprost treatment). The NaNP iontophoresis will be ADDITIONAL to the IV prostanoid therapy for which the patient was admitted.

Follow-up length: 0 months
Study entry: registration only

Intervention Type
Other

Phase
Not Applicable

Primary outcome measure
Increase in perfusion; one laser Doppler image will be taken before and after treatment on days 1, 2 and 5 where possible.

Secondary outcome measures
1. Modified Scleroderma Health Assessment Questionnaire (SHAQ); these will be filled out by patients at the start and end of the 5 day treatment period
2. Patient opinion, measured at the end of the 5 day treatment period

Overall study start date
01/09/2006

Completion date
30/09/2010

Eligibility

Key inclusion criteria
1. A diagnosis of SSc (or of another scleroderma-spectrum disorder)
2. Severe digital ischaemia
3. Digital ulceration severe enough to require hospitalisation for intravenous prostanoid therapy
4. Aged 18 - 80 years, either sex

Participant type(s)
Patient

Age group
Adult

Lower age limit
18 Years

Sex
Both

Target number of participants
Planned sample size: 6; UK sample size: 6

Key exclusion criteria
1. Aged less than 18 or greater than 80 years
2. Pregnancy

Date of first enrolment
01/09/2006

Date of final enrolment
30/09/2010
