Study information

Scientific Title
A double blind randomised placebo controlled study assessing the effect of intra-operative local anaesthetic administration on post-operative pain in adolescent children undergoing oral surgery under general anaesthetic to facilitate orthodontic treatment

Study objectives
Intra-operative administration of local anaesthetic significantly reduces post-operative pain experience in children aged 12 to 16 years having ambulatory oral surgery to facilitate orthodontic treatment under general anaesthetic.

Ethics approval required
Old ethics approval format

Ethics approval(s)
South East Wales REC Panel B, 14/10/2008, ref: 08/WSE02/57

Study design
Double-blind randomised placebo-controlled study

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Pain following ambulatory oral surgery

Interventions
Treatment group: standard dental local anaesthetic in the form 2% lidocaine hydrochloride with 1 in 80000 adrenaline by local injection
Control group: saline by local injection

Treatment takes place on a single day. No follow-up.

Intervention Type
Drug

Phase
Not Applicable

Drug/device/biological/vaccine name(s)
Lidocaine hydrochloride

Primary outcome(s)
Post-surgical pain using a Visual Analogue Scale, measured pre-surgery, at 30 minutes, 1 hour and 2 hours post-surgery.

Key secondary outcome(s))
Measurement of time to rescue analgesia.

Completion date
20/02/2010

Eligibility

Key inclusion criteria
1. Aged 12 to 16 years, either sex
2. Requiring surgery necessitating the raising of a mucoperiosteal flap and bone removal in at least one but not more than two sites
3. Suitable for ambulatory surgery

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Child

Lower age limit
12 years

Upper age limit
16 years

Sex
All

Key exclusion criteria
1. Age under 12 years
2. History of allergy to local anaesthetic of the amide type or to any components of the injectable formulation, paracetamol or non-steroidal anti-inflammatory drugs

Exclusion criteria due to the presence of adrenaline in the local anaesthetic formula:
3. Arterial hypertension
4. Coronary disease
5. Valvular heart disease

Standard anaesthetic-based exclusions for ambulatory surgery:
6. American Society of Anaesthesiologists (ASA) grade greater than 2
7. Body mass index greater than 35
8. Poorly controlled asthma

Date of first enrolment
20/02/2009

Date of final enrolment
20/02/2010
