Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

GP practice

Study type(s)

Treatment

Participant information sheet

Condition

Nutritional, Metabolic, Endocrine: Diabetes

Interventions

The package is to be written jointly with diabetes clinicians and educationalist then implemented and evaluated (after piloting) on randomly chosen group

Intervention Type

Behavioural

Primary outcome measure

Score of questionnaire measure lifestyle, confidence, emotional adjustment, weight concerns and diet barriers and medical outcomes

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/09/1999

Overall study end date

01/09/2003

Eligibility

Participant inclusion criteria

50 patients with type two diabetes diagnosed in past 2 years within primary care in Bolton

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

50

Participant exclusion criteria
