Study information

Scientific Title**Acronym**

Non-invasive measurement of cerebral energy status

Study objectives

We will use a combination of near infrared spectroscopy systems to assess non-invasively cerebral oxygenation, perfusion and cellular metabolic status in healthy volunteers and critically brain injured adults in order to monitor and quantify cerebral ischaemia in the latter. Specifically we will non-invasively measure changes in cell energy status by monitoring concentration changes in cytochrome oxidase (ox-CCO) using a novel hybrid optical spectroscopy system optimised for the measurement of ox-CCO in adults.

Ethics approval required

Old ethics approval format

Ethics approval(s)

MREC approved (ref: 04/Q0512/67)

Study design

Single centre non-randomised process of care trial

Primary study design

Observational

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Topic: Neurological; Subtopic: Neurological (all Subtopics); Disease: Nervous system disorders

Interventions

Volunteer studies: Hyperoxia, hypoxia, hypercapnea and hypocapnea

Patient studies: NIRS-derived changes in cerebral oxygenation, haemodynamics and oxidised cytochrome c oxidase concentrations, and cerebral microdialysis-derived markers of ischaemia (lactate:pyruvate ratio and glucose).

Study entry: registration only

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

Infrared specotrscopy

Key secondary outcome(s))

Estimated cerebal oxygen delivery

Completion date

31/12/2011

Eligibility

Key inclusion criteria

1. Healthy volunteers and patients with severe traumatic brain injury
2. Male and female, lower age limit of 18 years

Participant type(s)

Healthy volunteer

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/01/2006

Date of final enrolment

31/12/2011
