## Study information

**Scientific Title****Study objectives**

A randomised trial of early endoscopy or testing for helicobacter pylori in patients newly consulting for dyspepsia. The trial will establish the benefits of early endoscopy versus two management strategies based on testing for helicobacter pylori in primary care compared to conventional empiric treatment with gastric acid reducing drugs. Benefits will be assessed in terms of symptom relief, patient satisfaction and disability, reconsultation rates, drug prescribing and diagnostic yield.

**Ethics approval required**

Old ethics approval format

**Ethics approval(s)**

Not provided at time of registration

**Study design**

Randomised controlled trial

**Primary study design**

Interventional

**Study type(s)**

Treatment

**Health condition(s) or problem(s) studied**

Peptic ulcer disease

**Interventions**

1. Early endoscopy
2. Management strategies based on testing for Helicobacter pylori in primary care
3. Conventional empiric treatment with gastric acid reducing drugs (control)

**Intervention Type**

Other

**Phase**

Not Applicable

**Primary outcome(s)**

1. Diagnosis
2. Drugs prescribed
3. Repeat consultations
4. Need for further investigation/referral
5. Symptom response
6. Self-medication
7. Time off work
8. Patient satisfaction and quality of life (36-item Short Form Health Survey [SF-36])

**Key secondary outcome(s)**

No secondary outcome measures

**Completion date**

01/11/1998

## Eligibility

**Key inclusion criteria**

Patients newly presenting with dyspeptic symptoms

**Participant type(s)**

Patient

**Healthy volunteers allowed**

No

**Age group**

Not Specified

**Sex**

Not Specified

**Key exclusion criteria**

Not provided at time of registration

**Date of first enrolment**

01/05/1995

**Date of final enrolment**

01/11/1998

## Locations

**Countries of recruitment**

United Kingdom

England
