## Plain English summary of protocol

### Background and study aims

Strategies to improve health behaviour and well-being of Danish children are needed.

A multicomponent intervention "We Act – together for health" has been developed with the aim to improve the dietary habits, physical activity, well-being and social capital among school children aged 10-12 years by increasing their health experiences and promoting a healthy school environment.

### Who can participate?

Children aged 10-12 attending a participating school

### What does the study involve?

Four schools participate in the intervention, matched with control schools from the same municipality.

The intervention is made up of an educational component, teaching meal habits and other processes within school. The school component provides a workshop to develop teachers' competencies, and finally the parental component comprises a homepage, an APP, a Facebook-group and a handout produced by their child.

The intervention runs for 6 – 8 months, with data collected before and after by photograph, pedometer and questionnaire.

### What are the possible benefits and risks of participating?

There are no direct benefits or risks for the children participating in the We Act intervention. Hopefully they will enjoy teaching that builds on a democratic health education approach.

### Where is the study run from?

Eight schools in Denmark

When is the study starting and how long is it expected to run for?  
October 2014 to September 2017

Who is funding the study?  
Nestlé Denmark A/S (Denmark)

Who is the main contact?  
Mrs Marianne Sabinsky (Scientific)  
masab@food.dtu.dk

## Study information

**Scientific Title**  
"We Act – together for health" - a school-based multicomponent intervention to promote healthy diet, physical activity, and wellbeing in school children aged 10-12 years

**Study objectives**  
School children's participation in health education following the IVAC model develops their action competence in health and this, along with support from teachers, school management and parents, initiates a change process creating a healthy supportive school environment, leading to an increase in nutrition quality and dietary intake, physical activity, social capital and wellbeing in school children.

**Study design**

Quasi-experimental controlled pre- and post-intervention study

**Primary study design**

Interventional

**Study type(s)**

Prevention

**Health condition(s) or problem(s) studied**

Health promotion

**Interventions**

The intervention builds upon the health promoting school approach and the IVAC model. The settings are the school and the family.

Four schools are recruited for the intervention, and matched with four control schools from the same municipality, considering families' social backgrounds and school size.

The intervention schools receive an intervention made up of three educational components:

- 1) Lunch meal habits are integrated into science and Danish ("IEAT") and physical activity is integrated into maths ("IMOVE")
- 2) Vision workshop is integrated primarily in Danish
- 3) The Action and Change process is taught at class and school level.

Teachers participate in a course to develop competencies regarding the holistic health concept, active involvement of school children and the IVAC approach. Components developed for parental support included a homepage, an APP, a Facebook-group and a handout produced by their child.

The intervention runs for about 6-8 months. The control schools receive no intervention at all, only the scientific measurements which are recorded at baseline and after the intervention.

**Intervention Type**

Mixed

**Primary outcome(s)**

1. Dietary intake (food groups) is measured using the digital photographic method
2. Physical activity is measured using a pedometer
3. Wellbeing is measured using the Personal Social Capital Scale questionnaire

All primary outcome measures are collected at baseline and again after the intervention.

**Key secondary outcome(s))**

Anthropometrics (Height and Weight) are measured at baseline and after the intervention.

**Completion date**

30/09/2017

# Eligibility

## Key inclusion criteria

1. School does not have a school food programme
2. Sufficient number of children in 5th and 6th grade
3. School motivated to participate

## Participant type(s)

Healthy volunteer

## Healthy volunteers allowed

No

## Age group

Child

## Sex

All

## Key exclusion criteria

1. Small school with too few children

## Date of first enrolment

01/03/2015

## Date of final enrolment

01/08/2015

# Locations

## Countries of recruitment
