Study information

Scientific Title

Impact of an evidence-based leaflet on 'risk knowledge' of human papillomavirus (HPV) vaccination in disadvantaged pupils: a randomised controlled trial

Acronym

HPV-Eva

Study objectives

Evidence-based patient information leads to better risk knowledge in human papillomavirus (HPV) vaccination compared to standard information.

Ethics approval required

Old ethics approval format

Ethics approval(s)

1. The Ministry of Education and Culture, 30/10/2009
2. The Ethics Committee in Hamburg, 11/01/2011, ref: PV3344

Study design

Double-blind randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Treatment

Participant information sheet

Not available in web format, please use the contact details below to request the patient information

Health condition(s) or problem(s) studied

Human papillomavirus (HPV) vaccination

Interventions

Intervention: evidence-based patient information
Control treatment: standard patient information

Pupils received either the evidence-based leaflet or the standard one in the beginning of a 1.5 hour session.

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Human papillomavirus (HPV) vaccination

Primary outcome measure

Risk-knowledge, measured immediately after the intervention

Secondary outcome measures

No secondary outcome measures

Overall study start date

01/01/2010

Completion date

01/05/2010

Eligibility

Key inclusion criteria

Participants were vocational school pupils who were preparing for grade 10 graduation and who were members of the target group for HPV vaccination.

Participant type(s)

Patient

Age group

Child

Sex

Female

Target number of participants

94

Key exclusion criteria

Does not meet inclusion criteria

Date of first enrolment

01/01/2010

Date of final enrolment

01/05/2010
