Study information

Scientific Title

Study objectives
To evaluate three pragmatic treatment options currently in use in the general practice management of sore throat, which will incorporate a patient centred advice package developed during the project. This will be addressed in three phases:
Phase 1 - to assess the concerns of the patients presenting with sore throat, and develop standard advice which addresses these concerns
Phase 2 - to assess the acceptability, symptom control and complications of three different approaches to prescribing in sore throat.
Phase 3 (principal aim) - to assess the long term outcome (patient worries, surgery attendance, antibiotic prescription, complications) of the three approaches to prescribing.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Not specified

Study type(s)
Not Specified

Participant information sheet

Health condition(s) or problem(s) studied
Infection and infestations: Common cold

Interventions
1. Antibiotics and instructions to finish courses (Penicillin V or Erythromycin)
2. Advice alone (re symptom control/antibiotic efficacy/natural history/patient concerns)
3. Advice plus offering the patient choice of whether to have antibiotics or not

Intervention Type
Other

Phase
Not Specified

Primary outcome measure

Duration of symptoms, satisfaction and compliance

Secondary outcome measures
Not provided at time of registration

Overall study start date
01/02/1994

Completion date
31/08/1996

Eligibility

Key inclusion criteria
Not provided at time of registration

Participant type(s)
Patient

Age group
Not Specified

Sex
Not Specified

Target number of participants
Added December 2008: 3714

Key exclusion criteria
