Study information

Scientific Title
Use of mobile phone text messaging in transplant recipients

Study objectives

The main aims of the study are to assess whether patients can be trained to use SMS technology, and to determine whether the provision of a text messaging service improves drug compliance, outpatient clinic attendance rates and reduce rates of liver graft rejection in the first year post-liver transplant

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Not Applicable: Alerting transplant recipients

Interventions

Random allocation to [a] SMS [b] no use of SMS.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

Compliance rates for immunosuppressive medication, outpatient clinic attendance and liver graft rejection in the first twelve-months post-liver transplant.

Key secondary outcome(s)

Not provided at time of registration

Completion date

02/04/2004

Eligibility**Key inclusion criteria**

Patients attending the liver transplant clinic

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified
