Study information

Scientific Title

Use of mobile phone text messaging in transplant recipients

Study objectives

The main aims of the study are to assess whether patients can be trained to use SMS technology, and to determine whether the provision of a text messaging service improves drug compliance, outpatient clinic attendance rates and reduce rates of liver graft rejection in the first year post-liver transplant

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Not Specified

Participant information sheet

Health condition(s) or problem(s) studied

Not Applicable: Alerting transplant recipients

Interventions

Random allocation to [a] SMS [b] no use of SMS.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Compliance rates for immunosuppressive medication, outpatient clinic attendance and liver graft rejection in the first twelve-months post-liver transplant.

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/04/2003

Completion date

02/04/2004

Eligibility

Key inclusion criteria

Patients attending the liver transplant clinic

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified
