Study information

Scientific Title

Acronym
MAGPIE

Study objectives
To determine the effect of magnesium sulphate when used for women with pre-eclampsia on the risk of eclampsia and perinatal death. In addition, to determine the effects of other measures of important morbidity and on use of health services resources.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Hospital

Study type(s)
Treatment

Participant information sheet
Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied
Pre-eclampsia

Interventions
Magnesium sulphate/placebo.
Follow-up: until discharge following delivery. Four year follow-up of the children is planned.

Intervention Type
Other

Phase

Not Applicable

Primary outcome measure
1. Eclampsia
2. Death of the baby.

Secondary outcome measures
1. Maternal death
2. Serious maternal morbidity
3. Labour and delivery outcomes
4. Use of maternal health services
5. Serious neonatal morbidity
6. Use of neonatal health services

Overall study start date
01/01/1998

Completion date
31/01/2005

Eligibility

Key inclusion criteria
1. Not delivered, or delivered within the last 24 hours
2. Blood pressure today is ≥90 mmHg diastolic or ≥140 mmHg systolic, on at least two occasions
3. Proteinuria of at least 1+
4. There is clinical uncertainty about whether magnesium sulphate would be beneficial (factors likely to influence this uncertainty are the presence of any of the following: hypereflexia, frontal headache, abnormal liver function or coagulation, and epigastric tenderness)

Participant type(s)
Patient

Age group
Adult

Sex
Female

Target number of participants
10141

Key exclusion criteria
The woman does not wish to be randomised, for whatever reason/the attending clinician believes magnesium sulphate should either be given or withheld/hypersensitivity to magnesium /renal failure (women who have renal impairment may be randomised, but the volume of allocated treatment should be halved for each dose)/hepatic coma if risk of renal failure /myaesthenia gravis.

Date of first enrolment

01/01/1998

Date of final enrolment
31/01/2005
