Study information

Scientific Title

Clinical symptoms and time to diagnosis in a cohort of Southern Danish children with brain tumours: a retrospective observational cohort study

Study objectives

To identify time to diagnosis and first symptoms in children with brain tumours in order to improve coming diagnostic processes.

Ethics approval required

Old ethics approval format

Ethics approval(s)

No specific ethical requirements for this study according to Danish National Committee on Biomedical Research Ethics, as the study was observational and non-randomised only. Parent to every single participating child gave written consent.

Study design

Retrospective observational cohort study

Brain tumour

Interventions

All children living in Southern Denmark that had a brain tumour in the period from 01/10/1994 to 31/12/1999 were identified at the referral Hospital record system. Letters were forwarded to all parents, written agreement obtained and telephone interviews undertaken. Data were analysed by comparing pre-diagnosis symptoms with time from parents first encounters to diagnosis. No successive data obtained.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Clinical signs and pre-diagnosis symptomatic interval. Analyses were performed in 2010 with close August 2010.

Secondary outcome measures

No secondary outcome measures

Overall study start date

01/01/1999

Completion date

31/12/1999

Eligibility

Key inclusion criteria

Retrospective study using patient records. Records of all children living in Southern Danish Region with brain tumours, from 1994 to 1999, were investigated.
