Study information

Scientific Title

An evaluation of a hospital information and skills training video for the preparation of children waiting for day surgery

Study objectives

To establish whether a video-based pre-admission distance learning pack is more effective than standard hospital preparation leaflets alone in reducing anxiety to imminent planned surgery in children and their parents/carers? To establish if the video reduces anxiety and self-reported pain in children who have recently had planned surgery and their parents? To establish if the video is a user friendly and accessible method of pre-surgery preparation?

Health condition(s) or problem(s) studied

Paediatric surgery

Interventions

Prospective, randomised, comparative study.

Intervention Type

Procedure/Surgery

Phase

Not Applicable

Primary outcome measure

1. Self reported child fearfulness and anxiety pre and post surgery.
 2. Self reported parent/carer anxiety pre and post surgery.
 3. Self reported child post operative pain.
 4. Adult reported child post operative pain.
- All measures are questionnaires.

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/11/2002

Completion date

31/01/2005

Eligibility

Key inclusion criteria

All parents of children awaiting planned surgery on the booked admissions programmed at AH.
Male/female aged between 6 and 11 years of age.

Participant type(s)

Mixed

Age group

Mixed

Sex

Both

Target number of participants
