Study information

Scientific Title

Reducing salt intake in West Africa

Acronym

KUMASI Study

Study objectives

To reduce salt intake by health promotion and to relate the change in salt intake with the change in blood pressure (underlying hypothesis is that even a modest reduction in salt intake may cause a small reduction in population blood pressure).

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Hypertension

Interventions

Randomisation in clusters to Control Health Promotion Package or Intervention Health Promotion Package. The intervention cluster of villages will be exposed to a vigorous campaign of nutritional education to reduce salt intake.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Urinary sodium excretion
2. Blood pressure

Key secondary outcome(s)

Iodine excretion

Completion date

01/10/2003

Eligibility**Key inclusion criteria**

Men and women aged 40 to 75 years in 12 villages in Ashanti.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Pregnant women
2. Very sick

Date of first enrolment

01/04/2001

Date of final enrolment

01/10/2003
