Study information

Scientific Title

Study objectives

To determine the diagnostic accuracy of magnetic resonance cholangiopancreatography versus endoscopic cholangiopancreatography (ERCP) detection of choledocholithiasis in patients undergoing laparoscopic cholecystectomy.

Ethics approval required

Study type(s)

Screening

Participant information sheet

Health condition(s) or problem(s) studied

Cholelithiasis

Interventions

Patients were randomised to:

1. Endoscopic retrograde cholangiopancreatography
2. Magnetic resonance cholangiopancreatography

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Laparoscopic cholecystectomy and on table cholangiogram to confirm that the common bile duct is clear of stones.

Secondary outcome measures

Not provided at time of registration

Overall study start date

27/07/2001

Completion date

01/01/2004

Eligibility**Key inclusion criteria**

Total number of subjects = 168.

Participant type(s)

Patient

Age group

Not Specified

Sex
