Study information

Scientific Title

Multi-professional clinical medication reviews in care homes for the elderly: a randomised controlled trial with cost effectiveness study

Acronym

CARE MED

Study objectives

To determine whether a multi-professional clinical medication review leads to a reduction in falls and potentially inappropriate prescribing in care homes for the elderly. Thirty care homes will be recruited and randomised into two groups: the control group will receive usual care and the intervention group will receive two multi-professional clinical medication reviews.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Norfolk Research Ethics Committee approved on the 22nd February 2010 (ref: 09/H0310/96). Approval of amendment #1 given on the 4th October 2010.

Study design

Single centre randomised interventional trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Topic: Primary Care Research Network for England; Subtopic: Not Assigned; Disease: All Diseases

Interventions

The intervention group will receive two multi-professional clinical medication reviews at baseline and 6 months, with follow-up for a further 6 months. Residents' medications will be reviewed by pharmacist, pharmacy technician, GP and care home staff. Agreed action plan will be implemented by the medicines management team. The control group (15 care homes) will receive usual care (support they currently receive from the NHS), with data collection at baseline and 12 months. Both control and intervention homes are in the study for a total of 12 months.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

Number of falls, measured at 6 months prior to baseline (T0), T0 to 6 months (T1) and T1 to 6 months (T2)

Key secondary outcome(s))

Potentially inappropriate prescribing, measured at baseline, 6 months and 12 months

Completion date

Eligibility

Key inclusion criteria

- 1. Care homes for older people (average age greater than 65 years)
- 2. Care homes which have been registered for at least 6 months

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Senior

Sex

All

Key exclusion criteria

- 1. Care homes specifically for people with dementia
- 2. Care homes specifically for people with learning difficulties
- 3. Care homes specifically for people with sensory impairment
- 4. Care homes specifically for people with mental health problems
- 5. Care homes specifically for people with physical disabilities
- 6. Care homes specifically for people with alcohol dependence
- 7. Care homes which have received a medication review service from the PCT in the last six months
- 8. Residents who self-medicate
