Study information

Scientific Title

Study objectives

Hypothesis that popliteal and ankle block give better pain relief than ankle block alone in forefoot surgery.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Prospective randomised controlled single blind study

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Surgery: Forefoot

Interventions

1. Ankle block only
2. Ankle and popliteal block (combined)

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

Pain evaluation scores.

Key secondary outcome(s)

Satisfaction with pain relief.

Completion date

30/05/2005

Eligibility

Key inclusion criteria

Patients requiring forefoot surgery and willing to consent to nerve block.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

Peripheral neuropathies.

Date of first enrolment

30/11/2004

Date of final enrolment

30/05/2005

Locations

Countries of recruitment

United Kingdom

England
