Study information

Scientific Title

Study objectives
Nebulised DNase has a decreasing effect on the duration of a hospital admission in infants admitted with an RSV-bronchiolitis.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Received from local medical ethics committee

Study design
Multicentre randomised double blind placebo controlled parallel group trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Bronchiolitis, RSV-bronchiolitis

Interventions
Twice daily 2.5 mg DNase or placebo during admission.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. Length of stay
2. Symptom score

Key secondary outcome(s))
1. Duration of oxygen supplementation
2. Need for ICU-admission

Completion date
01/04/2006

Eligibility

Key inclusion criteria
1. RSV bronchiolitis with need for additional oxygen (saturation iÜ 92 %)
2. RSV-infection proven with rapid assay or culture
3. Age < 12 months
4. Admission on (medium care) ward
5. Study medication can be started within 24 hours

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Other

Sex
All

Key exclusion criteria
1. Premature birth (born < 32 weeks of gestation)
2. Congenital heart disease
3. Pre-existent lung disease (e.g. BPD or CF)
4. T-cel immune deficiency
5. Pre-treatment with systemic steroids

Date of first enrolment
01/01/2006

Date of final enrolment
01/04/2006
