Study information

Scientific Title

A multidisciplinary study of the management of neuroleptic medication in schizophrenia:
Educational and collaborative approaches

Study objectives

1. To investigate the determinants of psychotic patients' adherence to prescribed neuroleptic medication
2. To compare two different approaches to enhancing patients' adherence to prescribed neuroleptic medication

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Schizophrenia

Interventions

1. Compliance intervention (patients educated about benefits of neuroleptic medication)
2. Alliance intervention (structured intervention in which patients are encouraged to rationally appraise the costs and benefits of their neuroleptic medication)
3. Treatment as usual

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Neuroleptics

Primary outcome(s)

1. Attitudes towards neuroleptic medication as measured by the Drug Attitudes Inventory
2. Psychotic symptoms as measured by the Positive and Negative Syndromes Scale

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/06/2000

Eligibility

Key inclusion criteria

Patients suffering from Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition (DSM-IV) schizophrenia or schizoaffective disorder admitted to acute psychiatric wards in the North West of England and North Wales.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

228

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/06/1995

Date of final enrolment

01/06/2000
