Study information

Scientific Title

Acronym

CHAO2

Study objectives

Oxygen is a more effective treatment of acute cluster headache than air.

Ethics approval required

Old ethics approval format

Ethics approval(s)

The National Hospital for Neurology and Neurosurgery, approved on 3 March 2003 (ref: 01/N122)

Study design

Double-blind, placebo-controlled, cross-over randomised trial.

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Cluster headache

Interventions

Treatment of acute cluster headache with inhaled air or oxygen. Each participant will be randomised to treatment sequence of either AB or BA, where A is oxygen and B is inhaled air.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Proportion of patients pain free after 15 minutes of treatment comparing oxygen and air.

Key secondary outcome(s)

1. Rendering the patient pain free at 30 minutes
2. Reduction in pain scale at 15, 30, 45 and 60 minutes
3. Need for rescue medication from 15 minutes after treatment
4. Overall response to the treatment and overall functional disability
5. Effect on associated symptoms

Completion date

30/04/2007

Eligibility

Key inclusion criteria

1. Active Cluster headache
2. Attack duration between 45 minutes and three hours

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

All

Key exclusion criteria

1. Pregnant and lactating women will be excluded
2. Patients with moderate to severe chronic obstructive pulmonary disease will be excluded as the high-dose high-flow oxygen may affect their hypoxic respiratory drive.
3. Patients who cannot tolerate the oxygen mask in the correct fitting will be excluded from the study

Date of first enrolment
