Study information

Scientific Title
Achilles Tendinopathy Management: a randomised controlled trial comparing platelet-rich plasma with an eccentric loading programme

Acronym
ATM

Study objectives
There is no difference in Victorian Institute of Sports Assessment - Achilles (VISA-A) scores at 6 months between patients initially managed with platelet-rich plasma injections compared to patients managed with an eccentric loading programme.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Coventry Research Ethics Committee, 20/03/2009, ref: 09/H1210/18

Study design
Randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Health condition(s) or problem(s) studied
Achilles tendinopathy

Interventions
Intervention:
Platelet Rich Plasma Injection. The procedure will involve taking 52 ml of whole blood combined with 8 ml of an anti-coagulant which will be immediately centrifuged at 2400 for 12 minutes. After centrifugation the platelet layer (approximately 3 - 5 ml) will be extracted using a syringe and then injected into the Achilles tendinopathy.

Comparison:
Eccentric Loading Programme, involving two exercises. The first involves the patient being in a standing position with the heel over the edge of a step with the legs straight. The patient then slowly lowers their heels beyond the level of the step. The second exercise follows the same sequence but with the knee slightly bent, to maximise activation of the soleus muscles. These exercises are performed three times a day, 7 days a week for 12 weeks and are progressed as pain allows by adding weight via a back pack.

Intervention Type
Other

Phase
Not Applicable

Primary outcome measure
VISA-A at 6, 12, 24, 30, 36 and 52 weeks

Secondary outcome measures
EQ-5D and complications at 6, 12, 24, 30, 36 and 52 weeks

Overall study start date
01/02/2010

Completion date
01/02/2012

Eligibility

Key inclusion criteria
1. Midsubstance achilles tendinopathy diagnosed clinically through pain on palpation at a level of 2 - 6 cm above the tendon insertion and ultrasonography
2. The tendinopathy will be causing pain during loading activities and limit those activities
3. Duration of at least 3 months
4. Aged over 18 years, either sex

Participant type(s)
Patient

Age group
Adult

Lower age limit
18 Years

Sex
Both

Target number of participants
20

Key exclusion criteria
1. Tendinopathies secondary to systemic conditions such as rheumatoid arthritis and diabetes
2. Insertional Achilles tendinopathies
3. Pregnancy
4. Previous Achilles rupture or surgery
5. Dislocation or fracture of the lower limb within the preceeding 12 months

Date of first enrolment
01/02/2010

Date of final enrolment
01/02/2012
