Study information

Scientific Title

Study objectives

The purpose of this study is to demonstrate how physiotherapy designed on the McConnell regime (McConnell J. The management of chondromlalacia patellae: a long term solution. The Australian J of Physiotherapy, vol 32 no 4, 1986, pp215-223) can treat anterior knee pain and give lasting benefit.

Overall study start date

01/04/1996

Completion date

31/03/1998

Eligibility

Key inclusion criteria

- 1. The study population will come from two sources: the orthopaedic and rheumatology waiting list initiative combined fast track physiotherapy clinic; and the orthopaedic and rheumatology outpatient clinics.
- 2. Patients aged 16-40 years with anterior knee pain
- 3. Patients with anterior knee pain for longer than three months on most days

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

Not provided at time of registration

Key exclusion criteria

- 1. A history of knee locking: previous major trauma or dislocation
- 2. Osteoarthritis or inflammatory arthropathy
- 3. Ligamentous instability of the knee
- 4. Malignancy or infection
- 5. Previous physiotherapy in the last three months

Date of first enrolment
