Study information

Scientific Title
A pilot randomised controlled trial (RCT) assessing the effectiveness of a group-based cognitive rehabilitation programme for people with mild cognitive impairment in delaying functional and cognitive decline.

Study objectives
What are the potential problems associated with the design and implementation of an RCT to examine the effectiveness of a group-based cognitive rehabilitation programme for people with mild cognitive impairment (MCI)?

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Not specified

Study type(s)
Not Specified

Participant information sheet
Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied
Mental and Behavioural Disorders

Interventions
1. Cognitive rehabilitation programme
2. Course materials to work through in own time
3. Usual care (twice yearly assessments)

Intervention Type
Other

Phase
Not Specified

Primary outcome measure
Repeatable battery for the Assessment of Neuropsychological Status; Bristol Activities of Daily Living Scale; Geriatric depression scale -15; State Trait Anxiety Inventory; Quality of Life (QoL); Bath Assessment of Subjective quality of Life in Dementia; General Self Efficacy Scale; Resource Utilisation Dementia Scale.

Secondary outcome measures
Not provided at time of registration

Overall study start date
05/01/2004

Completion date
04/09/2004

Eligibility

Key inclusion criteria
30 patients over 50 with a diagnosis of MCI recruited from the Research Institute for the Care of Elderly (RICE) (10 participants for intervention and 20 controls).

Participant type(s)
Patient

Age group
Not Specified

Sex
Not Specified

Target number of participants
30

Key exclusion criteria
