Study information

Scientific Title

Application of adenosine-5-triphosphate infusions in palliative home care

Study objectives

1. Does Adenosine-5-Triphosphate (ATP) administration to terminal cancer patients improve the quality of life, in terms of functional status and health complaints such as fatigue, exhaustion and weight loss?
2. Does ATP infusion relieve family caregiver burden and reduce use of professional health care services?
3. Is application of ATP infusions in a home care setting feasible for terminal cancer patients?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Medical Ethical Committee of the Academic Hospital Maastricht and Maastricht University, date of approval: 4 July 2001 (ref. number: METC 01-092).

Study design

Open-labelled, randomised controlled trial with two parallel groups

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Quality of life

Participant information sheet

Health condition(s) or problem(s) studied

Cancer patients in the end stage of disease

Interventions

Control group:

Usual care and additional home visits by a dietician

Intervention group:

Usual care, additional home visits by a dietician and ATP infusions (eight to 12 hour infusion every week during the study period of eight weeks)

Intervention Type

Drug

Phase

Not Specified

Drug/device/biological/vaccine name(s)

Adenosine-5-triphosphate (ATP)

Primary outcome measure

1. Quality of life
2. Fatigue
3. Physical restriction

Secondary outcome measures

1. Appetite
2. Nutritional intake
3. Anthropometric measurements
4. Muscle strength
5. Caregiver burden

Overall study start date

01/01/2002

Completion date

31/12/2006

Eligibility

Key inclusion criteria

1. Cancer patients for whom no systemic treatment is available, or medical treatment options are restricted to palliative/supportive care
2. Life expectancy of less than six months
3. The diagnosis cancer must have been confirmed histologically or cytologically
4. World Health Organisation (WHO) performance status classification in cancer one or two
5. Presence of at least one of the following complaints:
 - a. fatigue
 - b. weight loss over 5% over last six months
 - c. anorexia

Participant type(s)

Patient

Age group

Not Specified

Sex

Both

Target number of participants

80-100 patients (depending on the drop-out rate)

Key exclusion criteria

1. Symptomatic angina pectoris
2. Symptomatic heart failure
3. Any form of AtrioVentricular (AV)-block (assessed by Electrocardiogram [ECG])
4. Cognitive dysfunction or other disease obstructing an adequate follow up
5. Life expectancy of less than four weeks
6. Concurrent palliative chemotherapy

Date of first enrolment

01/01/2002

Date of final enrolment

31/12/2006
