Plain English summary of protocol

Background and study aims

People with severe mental illness have great difficulties in finding and keeping a job. IPS Supported Employment is a model provided by community mental health services to help those people get a job. However, despite this help, many participants still find it difficult to remain in employment.

Wellness Recovery Action Plan (WRAP) is a method which help people with severe mental illness to get more self-insight, build self-management competencies and strengthen their psychological recovery.

The aim of this study is to find out if combining IPS Supported Employment and WRAP increases chances of finding and keeping a job.

Who can participate?

Adults with severe mental illness using the services of four mental health agencies.

What does the study involve?

Participants are randomly allocated to one of two groups: IPS Supported Employment plus WRAP or IPS Supported Employment only. The work situation is assessed and participants fill in questionnaires at the start of the study, after six and 12 months.

Interviews of employment specialists as well to discuss benefits of WRAP.

What are the possible benefits and risks of participating?

There are no risks involved. All participants free to join or not to join.

Where is the study run from?

Led by the Trimbos Institute and conducted in partnership with the knowledge centre Phrenos. Four mental health agencies involved (Netherlands).

When is the study starting and how long is it expected to run for? January 2013 to March 2015

Who is funding the study?

"ZonMw" programme 'Participation and health' ((Netherlands)

Who is the main contact? Dr Harry Michon hmichon@trimbos.nl
