Plain English summary of protocol

Background and study aims

Roots of Empathy have designed the Nurturing Empathy before Transition (NEBT) project which aims to increase empathy and prosocial behaviour, as well as having a positive impact on the mental health of school children in year 5. It is described by the delivery partners as "an evidence-based, preventative intervention for primary school children, that aims to reduce aggression, including bullying, and increases children's social and emotional competence."

Sheffield Hallam University have been appointed as the independent evaluator and are using a Randomised Control Trial (RCT) to evaluate if, how and why the programme works. As part of this RCT, 140 schools will be recruited (60 schools in 2022/3 and 80 schools in 2023/4). Seventy will be randomly assigned to the intervention (30 schools in 2022/3 and 40 schools in 2023/4). Over the two years, 70 schools will be assigned to the control group. As such they will receive £400 as an incentive for their data collection but will not receive the intervention. The project will be delivered by a member of school staff that will have undergone training to become a Roots of Empathy Instructor, in partnership with a volunteer family (parent and baby) and a classroom teacher. The Instructor is recruited from the school but cannot be the year 5 classroom teacher. In the past Teaching Assistants and or Parent Liaison workers have taken on the role of Instructor. The Instructor receives training, is assigned an ROE mentor and given ongoing professional development. For more information visit the Roots of Empathy website.

The aim of this study is to evaluate the impact of delivering the Roots of Empathy programme, in a school setting to year 5 primary school pupils. This randomised controlled trial (RCT) has been funded by the YEF and will focus on the development of mental health, empathy and prosocial behaviour. The evaluation is not an assessment of individual pupils or schools but is about understanding how effective the RoE programme is overall.

Who can participate?

This research is for primary schools in England with a minimum of 21% of pupils eligible for pupil premium. In addition, schools need to be in one of the following broad geographical areas; London, Midlands, Yorkshire and Merseyside. One class in each school will be identified to take part in the programme.

What does the study involve?

Schools are randomised to one of two groups, either the intervention group or the control group.

The intervention group will receive the RoE programme in their school for one year 5 class. The RoE programme consists of 27-sessions, covering nine themes. This equates to approximately three sessions a month, they are: a Pre-family visit session, a Family visit (with the volunteer parent and baby), and a Post-family visit session.

Control group, no activities planned. ALL pupils will also be expected to fill in a survey at two-time points, to assess their mental health, empathy and prosocial behaviour. Teachers and leads from participating schools will also be asked to fill in questionnaires that will give detail on the context of their school and their perceptions of student's behaviour.

What are the possible benefits and risks of participating?

All participating schools have the opportunity to be part of a high-quality research trial, working with experienced researchers from Sheffield Hallam University's Institute of Education (SIOE) that will provide insight into if, how and why the Roots of empathy programme leads to increases in mental health, empathy and prosocial behaviour. Control schools will receive a financial payment on completion of different elements of the study. The expectation is that this money compensates control schools for taking part in this research. Therefore, pupils will get to take part in the Roots of Empathy or (if in the control group) benefit from enriched educational experiences. One risk is that pupils will be asked to participate in additional tasks as part of this evaluation-in addition to their normal school timetable. The risks have been minimised by making sure any evaluative tasks, such as questionnaires are as short as possible and only used if essential to the study.

Where is the study run from?

The study is taking place schools in the UK. The Randomised Control Trial evaluation is being conducted by Sheffield Institute of Education at Sheffield Hallam University (UK)

When is the study starting and how long is it expected to run for?

Who is funding the study?

This study is funded by the Youth Endowment Fund (YEF) (UK)

Study information**Scientific Title**

Nurturing Empathy before Transition in Y5 pupils. A randomised controlled trial to explore whether the Roots of Empathy programme for Y5 pupils improves their mental health, increases their empathy and increases their prosocial behaviour, in comparison to control schools

Acronym

ROE NEBT RCT

Study objectives

The aim of the evaluation is to understand if and how the Roots of Empathy programme, delivered as part of the Nurturing Empathy before Transition project improves pupil mental health, increases their empathy and prosocial behaviour.

Health condition(s) or problem(s) studied

Mental health, empathy and prosocial behaviour in Y5 pupils

Interventions

Roots of Empathy will be training a member of school staff to deliver their programme for the NEBT project. The Roots of Empathy (RoE) programme consists of 27 sessions, consisting of 3 per month with the parent and baby attending one session per month, and a preparation and debrief session either side. Sessions last for approximately 40-45 minutes. However, as the welfare of the mother and baby are of paramount importance it is feasible that the mother and baby session may be cut-short if needed.

The intervention group will receive the RoE programme in their school for one year 5 class. The RoE programme consists of 27-sessions, covering nine themes. This equates to approximately three sessions a month, they are: a Pre-family visit session, a Family visit (with the volunteer parent and baby), and a Post-family visit session.

Control group, no activities planned. ALL pupils will also be expected to fill in a survey at two-time points, to assess their mental health, empathy and prosocial behaviour. Teachers and leads from participating schools will also be asked to fill in questionnaires that will give detail on the context of their school and their perceptions of student's behaviour.

Intervention Type

Behavioural

Primary outcome measure

1. Mental health measured using the Me and My Feelings questionnaire (Deighton et al., 2012) at baseline and endline (10-11 months)

Secondary outcome measures

1. Mental health measured using the Strengths and Difficulties Questionnaire (SDQ) (Goodman, 2001) at baseline and endline (10-11 months)
2. Empathy measured using the Basic Empathy Scale (BES) (Jolliffe et al., 2006) at baseline and endline (10-11 months)

Overall study start date

01/10/2021

Completion date

01/08/2024

Eligibility

Key inclusion criteria

School level:

1. Primary school
2. In Yorkshire, Merseyside, the Midlands (East and West) and Greater London
3. 21% or more FSM/PP

Participant type(s)

Other

Age group

Child

Sex

Both

Target number of participants

140 schools, approx 4200

Key exclusion criteria

School level:

1. Prior experience of the RoE programme
2. Private schools, special schools or PRU

Date of first enrolment

01/04/2022

Date of final enrolment

07/10/2022

Results and Publications

Publication and dissemination plan

The results will be published in a report for the YEF, which will be publicly available. In addition, results planned publication in a high-impact journal and dissemination at relevant conferences

Intention to publish date

01/08/2025

Individual participant data (IPD) sharing plan

For the purpose of research, at the end of the study pupil data supplied to the SHU evaluation team by schools/ROE will be shared with the Department of Education (DfE). The DfE will pseudonymise the data, so it is no longer possible to identify any individual young person from the study data. The DfE will then transfer the data to the YEF Data Archive, which is stored in the Office for National Statistics (ONS) Secure Research Service. The YEF is the 'controller' of the information in the Archive. It will be possible for information in the Archive to be linked with information about the pupils from the National Pupil Database (NPD) and the Police National Computer (PNC). This will help approved researchers find out the long-term impact of the projects funded by YEF. It is YEF's intention to retain data in the YEF archive indefinitely. This is consistent with the Information Commissioner's Office (ICO)'s view that data can be held indefinitely for research and archiving purposes. However, YEF will commit to reviewing every 5 years, following submission to the YEF archive, to see whether there is a continued benefit to storing the data and its potential use in future research.
