Study information

Scientific Title

Study objectives
To compare the performance of the Airway Management Device (AMD) with the Classic Laryngeal Mask Airway™ during insertion, maintenance and removal in anaesthetised adult patients.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Research Ethics Committee of Royal United Hospital Bath approved the study

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Surgery: Anaesthesia

Interventions
Airway Management Device versus the Classic Laryngeal Mask Airway™ during surgery in anaesthetised patients.

Intervention Type
Device

Phase
Not Applicable

Primary outcome(s)
Success of airway placement

Key secondary outcome(s)
1. Time to achieve an airway
2. Airway manipulations required
3. Complications during use
4. Fibre-optic assessment of airway positioning

Completion date
30/04/2003

Eligibility

Key inclusion criteria
Adult patients undergoing surgery requiring general anaesthetic which would normally involve using LMA

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Key exclusion criteria
1. Any pathology of the neck or the upper respiratory or upper alimentary tract
2. At risk of pulmonary aspiration of gastric contents
3. Weight less than 50 kg or greater than 100 kg

Date of first enrolment
01/09/2000

Date of final enrolment
30/04/2003
