Study information

Scientific Title
Evaluation of the RESETTLE project (formerly Community Risk Assessment and Management Service) for Released High Risk Prisoners

Acronym
RESETTLE

Study objectives
To establish whether a co-ordinated community psychosocial provision for personality disordered offenders is effective in producing both beneficial changes in individuals and reducing social exclusion and reducing risk and thus increasing public protection.

Case participants will be randomly allocated to the Resettle project, formerly known as CRACMS (Community Risk Assessment and Case Management Service). The Resettle intervention will involve the offender spending time on a regular basis on the Resettle site. During this time they will be interacting in a social therapy environment.

Please note that as of 13/06/2013, the following changes were made to the trial record:
1. The anticipated end date was updated from 01/04/2010 to 31/05/2013
2. The target number of participants was updated from 60 to 72

Ethics approval required
Old ethics approval format

Ethics approval(s)
MREC approved (ref: 08/H0903/11)

Primary study design
Interventional

Study design
Multicentre randomised interventional treatment trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Topic: Mental Health Research Network; Subtopic: Service Delivery; Disease: Not Applicable

Interventions
1. Control participants: released to the usual post-release good quality support offered following release from prison.
2. Resettle: regular group activities, specific psychosocial treatments and risk management. The intervention will be delivered by Resettle sociotherapists.

Study entry: single randomisation only

Intervention Type
Behavioural

Primary outcome(s)
Current primary outcome measures as of 13/06/2013:
1. Reoffending data:
1.1. Police Records: Police National Computer (PNC)
1.2. Probation records

Previous primary outcome measures until 13/06/2013:
Personality functioning:
1. International Personality Disorder Evaluation (IPDE)
2. Hare Psychopathy Checklist Screening Version (PCL-SV)
3. Revised Adult Personality Disorder Functioning Assessment (RAPFA)
4. The Inventory of Interpersonal Problems
5. Behavioural Inhibition System (BIS)

Key secondary outcome(s)
Current secondary outcome measures as of 13/06/2013:
1. Antisocial behaviour
1.1. Self-report delinquency scale (SRD)
2. Personality functioning
2.1. Inventory of Interpersonal Problems (IIP)
2.2. Barratt Impulsivity Scale (BIS)
3. Psychiatric illness/symptom and substance abuse/dependency
3.1. Structured Clinical Interview for DSM-IV (SCID I)
3.2. Symptom Check List (SCL-90-R)

Previous secondary outcome measures until 13/06/2013:
1. Antisocial behaviour:
1.1. Self-Reported Delinquency (SRD)
1.2. LIVA
2. Psychiatric illness/symptoms and substance abuse/dependence:
2.1. Structured Clinical Interview for DSM-IV (SCID I)
2.2. Symptom Check List (SCL-90-R)

Completion date
31/05/2013

Eligibility

Key inclusion criteria
1. Men being released from prison establishments to the Merseyside Probation Area
2. Some formal or informal diagnosis/indication of 'personality disorder'
3. Supervised via the Multi-Agency Public Protection Arrangements (generally a Level 2 or 3 classifiation)

Participant type(s)
Other

Healthy volunteers allowed
No

Age group
Adult

Sex
Male

Total final enrolment
72

Key exclusion criteria
1. Active mental health difficulties that are un-treated
2. Men being released to an area other than Merseyside Probation Area

Date of first enrolment
01/04/2008

Date of final enrolment
31/05/2013
