Study information

Scientific Title

Diagnosis: Earlier Looking At Your Symptoms - development of a patient-centred tool to measure diagnostic delays

Acronym

DELAYS2

Study objectives

This pilot study aims to determine the acceptability (to patients and research nurses), feasibility and validity of a tool to measure patient and primary delays in cancer. In particular this work will:

1. Pilot the recruitment of patients with a recent and established diagnosis of one of seven specific cancers (or groups of cancers) and the administration of the tool by research nurses
2. Assess non-response bias
3. Assess and seek ways to minimize the level of anxiety that may be raised as part of the data collection process
4. Assess completion rates
5. Compare the response to the tool being administered by a research nurse with self-completion facilitated by a research nurse

Ethics approval required

Old ethics approval format

Ethics approval(s)

North East Wales Local Research Ethics Committee. Date of approval: 03/04/2007 (ref: 07/WNo03/1)

Study design

Multi-centre randomised controlled trial

Primary study design

Interventional

Study type(s)

Other

Health condition(s) or problem(s) studied

Cancer (breast, colorectal, lung, gynaecological, urological, upper GI, haematological)

Interventions

The participants will be randomly allocated to self-completion vs researcher administration of a tool to measure symptoms prior to a diagnosis. The tool is a document with open and closed questions about symptoms patients have had and how long they have had them for.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

To compare the two groups in terms of overall completion rates using an intention to treat analysis

Key secondary outcome(s))

A comparison will be made between the two modes of the average anxiety levels. This will be assessed after diagnosis as soon as possible, using the Six-item State-Trait Anxiety Inventory (STAI).

Completion date

30/09/2009

Eligibility

Key inclusion criteria

1. Both males and females, age 18+ (no upper limit)
2. Cancer patients with new primary diagnoses of one or groups of the following seven cancers: breast, colorectal, lung, gynaecological, urological, upper gastrointestinal (GI), haematological
3. Patients who are aware of the diagnosis of cancer and confirmed as eligible by Clinical Team

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

All

Key exclusion criteria

1. Patients close to death
2. Patients without mental capacity or linguistic capacity to complete the questionnaire

Date of first enrolment

01/09/2008

Date of final enrolment

30/09/2009
