Study information

Scientific Title
To investigate the role of folic acid in the management of ribavirin induced haemolytic anaemia in patients on combination treatment for chronic Hepatitis C virus infection

Study objectives
The aim of this study is to assess if there are any beneficial effects of folic acid therapy in Ribavirin induced haemolytic anaemia.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Infections and Infestations: Hepatitis C

Interventions
Randomised controlled trial
1. Folic Acid
2. Placebo

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Folic acid

Primary outcome(s)
Rate of haemoglobin drop and rise and number of patients who have to have Ribavirin dose reduced due to anaemia

Key secondary outcome(s)
Not provided at time of registration

Completion date
30/08/2005

Reason abandoned (if study stopped)
Participant recruitment issue

Eligibility

Key inclusion criteria
60 patients with chronic hepatitis C virus infection on combination therapy (30 will get folic acid and 30 placebo)

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
Does not match inclusion criteria

Date of first enrolment
01/09/2003

Date of final enrolment
30/08/2005

Locations

Countries of recruitment
United Kingdom

England

Study participating centre
Department of Gastroenterology
London
United Kingdom
E9 6SR

Sponsor information

Organisation
