Study information

Scientific Title

Prospective randomised controlled trial of room temperature versus body temperature saline in outpatients hysteroscopy and pain scores

Study objectives
Comparison of body temperature saline versus room temperature saline in outpatient hysteroscopy. Assessment of procedural discomfort using pain scores.

Ethics approval required
Old ethics approval format

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Other

Health condition(s) or problem(s) studied
Urological and Genital Diseases: Hysteroscopy

Interventions
This is a pilot study comparing discomfort levels in two groups of patients undergoing hysteroscopy.
In the one group, hysteroscopy will be performed in the clinic using room temperature saline to distend the uterine cavity (the existing method in use).
In the second group saline warmed to body temperature is used.
Discomfort levels are assessed in the two groups using pain scores.

Intervention Type
