Study information

Scientific Title
A clinical pharmacology study to investigate the utility of therapeutic drug monitoring in challenging childhood cancer patient populations

Study objectives
The use of therapeutic drug monitoring relates to the measurement of drug levels in biological samples to individualise patient treatment through changing drug doses. This is conducted with a view to improving how effective the drug is and/or reducing side effects.

Over several years we have identified childhood cancer patients who clearly benefit from this treatment approach with commonly used cancer drugs. These 'hard to treat' patients include pre-term infants and newborn children, patients with no or poorly functioning kidneys, obese children and patients receiving high dose chemotherapy. The current study will allow us to maximise the information that is generated from treating patients in this way, with information relating to individual patient exposure and clinical outcome collected from a significant number of patients.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Approved 23/01/2019, North East - Newcastle and North Tyneside 2 Research Ethics Committee (NHSBT Newcastle Blood Donor Centre, Holland Dr, Newcastle upon Tyne NE2 4NQ; 0207 104 8019; nrescommittee.northeast-newcastleandnorthtyneside2@nhs.net), ref: 18/NE/0384

Interventions
The trial will recruit an estimated 150 patients within defined 'hard to treat' categories. These include pre-term infants and newborns, patients with impaired kidney function or no kidneys, patients receiving high dose chemotherapy, obese patients, and those receiving chemotherapy where the drug is injected directly into the tumour.
Patients will be referred to the study following decisions made by their treating clinician to use Therapeutic Drug Monitoring as part of the patient's standard treatment.
Clinical and response data will be collected following each cycle of treatment and all relevant clinical information and data generated will be entered into a patient registry in an anonymised form available only to registered medical staff with individual password-protected user accounts. Clinicians will then be able to use this information when treating future patients within these 'hard to treat' groups.

Intervention Type

Other

Primary outcome(s)
Definition of the pharmacokinetics of widely used anti-cancer drugs in defined 'hard to treat' patient populations; assessment of factors associated with pharmacokinetic variability in defined 'hard to treat' patient populations.
Measured by analysis of samples from patients.
Time point - end of study.

Key secondary outcome(s)
1. Establishment of a national registry to provide access to data relating to the dosing of a comprehensive library of chemotherapeutic in defined 'hard to treat' patient populations.
Measured by analysis of samples from patients - data published on trial website.
Time point - ongoing throughout study as data become available.

2. Development of national treatment guidelines supporting the use of Therapeutic Drug Monitoring treatment strategies for patients treated in the UK and more widely.
Measured by analysis of samples from patients.
Time point - end of study.

Completion date
01/06/2029

Eligibility

Key inclusion criteria
1. Age <18 years.
2. Confirmed diagnosis of cancer.
3. Patient receiving a ‘non-standard’ strategy of chemotherapy delivery (see below for examples of patient groups that fall into this category).*
4. Appropriate venous access.
5. Request from the treating clinician for therapeutic drug monitoring approach to treatment.
6. Willingness to participate and written informed parental/patient consent (signed and dated).

* Patients receiving non-standard chemotherapy dosing regimens will include the following groups: pre-term infants and neonates, anephric patients, patients receiving high dose myeloablative chemotherapy, patients undergoing chemoembolisation procedures, obese patients (BMI at or above the 95th percentile for children of the same age and sex).

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Mixed

Lower age limit
0 years

Upper age limit
18 years

Sex
All

Total final enrolment
168

Key exclusion criteria
Failure to meet the inclusion criteria.

Date of first enrolment
01/05/2019

Date of final enrolment
30/11/2028
