Plain English summary of protocol

Background and study aims

This study is designed to allow families of immunosuppressed children and young people to self-record their experiences of COVID-19 and other viral respiratory illnesses during the COVID-19 epidemic.

Who can participate?

Parents of immunosuppressed patients and young people aged 16-17 years who are immunosuppressed

What does the study involve?

Participants will be provided with online information and asked to fill in online questionnaires at baseline and weekly thereafter. Information collected will include immune-system affecting medication, symptoms, contact with health care providers, test results and impact on daily activities. Data will be collected and analysed weekly to be able to monitor any potential risk factors for severe disease.

What are the possible benefits and risks of participating?

None

Where is the study run from?

Southampton General Hospital (UK)

When is the study starting and how long is it expected to run for?

March 2020 to March 2022 (updated 02/03/2021, previously: June 2021)

Who is funding the study?

British Paediatric Allergy, Immunity and Infection Group

Who is the main contact?

Dr Hans De Graaf, hans.degraaf@uhs.nhs.uk

Study information

Scientific Title

Coronavirus infection in primary or secondary immunosuppressed children

Study objectives

Children vulnerable to infections are more frequently and more severely affected by SARS-CoV-2.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved 17/03/2020, Yorkshire & The Humber - Leeds West Research Ethics Committee (NHSBT Newcastle Blood Donor Centre, Holland Drive, Newcastle upon Tyne, NE2 4NQ, UK; no telephone number provided; leedswest.rec@hra.nhs.uk), ref: 20/YH/0110

Study design

Observational qualitative study

Primary study design

Observational

Study type(s)

Health condition(s) or problem(s) studied

COVID-19 (SARS-CoV-2 infection)

Interventions

Eligible patients will be identified by the team responsible for their clinical care. Patients and/or parents will be contacted NHS clinical methods with a weblink directing them to the study website. This website will provide information about the study, an email address to ask questions if required and links to current NHS, Dept of Health and Social Care, and Public Health England COVID-19 advice.

If the patient and/or parent are willing to participate they will complete an online consent form. Data of enrolled patients will be checked with their health records to confirm eligibility.

Data will be collected via online questionnaires. The first questionnaire will include information about the patient, their disease and the medication they are using. Following this they will be sent a link each week inviting them to fill in an online questionnaire. These weekly questionnaires will monitor possible symptoms of COVID-19 (and other current respiratory tract illnesses), results of COVID-19 testing, contact with people diagnosed with COVID-19, general practitioner (GP) or health care attendance, hospital admission, incidences of self-isolation, the stopping or postponing of immunosuppressive drugs, effects on daily life, possible flare of any auto-immune disease (in relevant patients) and parental anxiety. They will also be provided with up to date information and advice and an email address for any further questions.

It will be clear to families that they should continue to link to and liaise with their paediatric speciality clinical teams as per normal routine and emergency care and not through the study helpline.

All participants will be provided with a lay summary of results when the study is completed.

Intervention Type

Other

Primary outcome(s)

COVID-19 infection in children/adults assessed by online questionnaire as frequency of: cough, fever, diarrhoea, shortness of breath, sore throat, blocked nose, red eyes, headache, joint pain, muscle pain, fatigue, chills, nausea, vomiting, over a year

Key secondary outcome(s)

Over the 1 year period:

1. Number of children/adults tested positive for COVID-19 measured using patient records
2. Patient/parent reported positive tests for COVID-19 measured using the online questionnaire
3. Number of children/adults admitted in hospital because of COVID-19 measured using patient records
4. Patient/parent reported admissions in hospital because of COVID-19 measured using the online questionnaire
5. To assess the impact of COVID-19 infection on the daily activities of immunosuppressed adults and children measured using patient records
6. Patient/parent reported effect of COVID-19 on daily activities measured using the online questionnaire

Completion date

17/03/2022

Eligibility

Key inclusion criteria

1. Parent of immunosuppressed patient aged <16 years or immunosuppressed patient aged 16-17 years
2. Family able to complete the questionnaire which will be in English (due to current resources available translation will not be possible)
3. Reliable access to the internet
